

Forensic Investigation Report: CASE-2026-0001

Case Title: Case Zero: High-Yield Telegram Investment Scam | Generated: 2026-09-30 00:24:13 UTC

1. Executive Summary

This standardized forensic attribution report was autonomously compiled by ChainNetra for law-enforcement agencies. The investigation traced illicit cryptocurrency flows originating from suspect wallet **TXYZCollectorAlpha7771111111111111** on the **TRON** network. Multi-hop fund flow analysis identified immediate cash-out consolidation at a Virtual Asset Service Provider (VASP), providing corroborated evidence for prompt account freezing and 90-day KYC preservation orders.

2. Victim & Complaint Parameters

Case ID	CASE-2026-0001	Primary Chain	TRON
Suspect Root Wallet	TXYZCollectorAlpha777111...	Case Status	Active
Investigating Officer	tester@demo	Time-to-VASP	2.85 seconds
Taint Propagation Model	HAIRCUT	Data Ingestion Mode	DEMO

3. Target VASP Attribution & Confidence Breakdown

Target VASP Entity	DemoX Exchange	Attribution Confidence	92.4% (VERIFIED)
VASP Category	Centralized Exchange	Deposit Vault Address	TXDemoxDepositVault9999999999999999
Hops From Suspect	4 Hops (Consolidated)	Attributed Value	\$133,500.00 USDT (~1.11 Cr)
Evidence Heuristic	Deposit-to-Hot Sweep Pattern	Jurisdiction / SLA	Seychelles / < 2 Hours

4. Recommended Priority Law Enforcement Actions

- **[CRITICAL]** Dispatch Emergency Account Freeze Notice to DemoX Exchange compliance team for deposit vault TXDemoxDepositVault9999999999999999.
- **[HIGH]** Issue Section 91 CrPC / IT Act production order for 90-day preservation of KYC identities, login IP addresses, device IMEIs, and connected bank details.
- **[HIGH]** Cross-reference beneficiary records against linked interstate NCRP cyber complaints.
- **[MEDIUM]** Place intermediary mule wallets on 24/7 automated ChainNetra mempool watchlist.

5. Digital Evidence Certificate (Template)

I hereby certify that this electronic forensic report is a true reproduction of cryptographically logged records extracted from the ChainNetra ledger indexing engine. The hash of the underlying canonical trace snapshot is **5d6267f804492c7a423b0118c9d62e70163bc89740f22da79759a485c79f8340**. The system was functioning under normal operating parameters during data generation.
